

Dr. Nutt completed his pediatric residency training at the Golisano Children's Hospital at the University of Rochester Medical Center in 2012. He completed additional training as a Academic General Pediatrics Fellow (2012-2014), a Developmental & Behavioral Pediatrics fellow (2014-2016), a LEND (Leadership and Educations in Neurodevelopmental Disabilities) fellow (2014-2015), and received his Master's in Public Health degree (2016).

Dr. Nutt has presented his research at both regional and national conferences. His overall research and clinical interest is aimed to better characterize and improve the experience of patients and their families after receiving a new diagnosis of hearing loss. A recent presentation on the importance of bilingualism (English and ASL) on developmental progress of deaf and hard of hearing children has generated a great deal of national and international interest. His specialty-specific interest is to understand the interactions between deafness and developmental disabilities, and reduce health disparities in underserved or socially vulnerable populations.

Rob and his family currently reside outside of Charlotte, North Carolina, where works as a Developmental & Behavioral Pediatrician in the Carolinas Healthcare System, the second largest not-for-profit health care system in the United States.
