

**Mary Pat Moeller, Ph.D.** is Director of the Center for Childhood Deafness and the Language Development Laboratory at Boys Town National Research Hospital in Omaha, Nebraska. After many years of clinical practice in educational and rehabilitative audiology, she obtained a Ph.D. in child language at the University of Nebraska-Lincoln. Her current research explores factors influencing the outcomes of children who are deaf or hard of hearing. She is co-principal investigator with J. Bruce Tomblin of an NIH-funded, prospective, multi-site, longitudinal study of spoken language development in children who are hard of hearing. In addition to her longitudinal research efforts, Dr. Moeller conducted NIH-funded health communication research related to Newborn Hearing Screening and early intervention. She and her colleagues at Boys Town National Research Hospital developed parallel websites ([www.babyhearing.org](http://www.babyhearing.org) and [www.audiciondelbebe.org](http://www.audiciondelbebe.org)) as part of their efforts to disseminate information on early identification. Dr. Moeller led a consensus conference in Austria in 2012 resulting in a best practice statement on family-centered early intervention practices for children who are deaf or hard of hearing. She continues to work with this international group to foster best practices in Family Centered Early Intervention. Dr. Moeller has published and lectured internationally on topics related to developmental outcomes and early intervention practices for children who are deaf or hard of hearing. She received the Honors of the American Speech-Language-Hearing Association (ASHA) in 2013. She was ASHA's representative to the Joint Committee on Infant Hearing from 2010 - 2017.
